

# Massive Vulnerability uncovered for the 2020 Elections!

Many states' online voting portals need only a name and date of birth to access.

This is a massive vulnerability.

When a replacement ballot is requested via an online portal, any ballots that are in transit, are sitting in a voter's house, or are yet to be cast are CANCELLED and only the newly requested ballot will be accepted.

Anyone with a computer can automate fraudulent logins with no timeout protection from wrong entries. In plain terms, there is no security at all. With only a name and DOB, you can login and view anyone's address, political party affiliation, and even request a printable ballot for them. We should assume this vulnerability is already being abused internationally and domestically.

Some online voter portals require the last 4 digits of your SSN or DL#. While this may sound secure, the information has been compromised by corporate and government cyber security leaks, such as when Equifax leaked the SSNs of 150 MILLION Americans in 2017.

If a bank's website was as vulnerable as these states' voting portals, they would be sued for criminal negligence.

## **Don't take our word for it, verify it yourself!**

Check your voter registration portals for any of the following states: Alaska, Arkansas, California, Florida, Indiana, North Carolina, Oregon, Oklahoma, Texas, Washington

This is a terrible affront to our democracy, and must be dealt with swiftly to maintain the integrity of our elections!
